DETAILED ACTION

Election/Restrictions

1. The Examiner acknowledges the Applicant's election of claims drawn to Species I, of Group A, without traverse. Claims 2-9, 11-22, 24-31, 33-44, 46-53, and 55-66 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

3. The use of the trademark "Mammotome" has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Objections

4. Claim 1 is objected to because of the following informalities: the work “though” should be changed to read “through”. Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1,10,23,32,45,and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Corvi et al. (20020038097). Corvi et al. shows a biopsy device for collecting a tissue sample comprising an introducer having a working end portion which includes an introducer 12 and cutter portion 18; hollow tubular sheath 12 having proximal and distal ends 14 and 16 respectively, the introducer having a side aperture 42 or 204 (page 3, paragraph 31), a cutter assembly 18 comprising a hollow cylindrical tube (page 3 paragraph 32) with diameter sized to fit inside of introducer, introducer having cutting edge 20 and cutting tube having cutting edge 22 at distal end; the endoscope assembly 264 is situated within cutter assembly (best shown in Figure 15) comprises a fiber optic bundle received within cutter tube.
